# Transfer Factor Products

## What are Transfer Factors?

Naturally occurring immune active proteins called Lymphokines.

## How are these Transfer Factors made?

They are made by white blood cells in response to pathogens and other environmental stimuli, deposited in colostrum and egg yolks, harvested and highly filtered for purity.

## What do Transfer Factors do?

Transfer information between white blood cells from experienced donors to naive recipients.

## Are Transfer Factors the same as antibodies?

No, Transfer Factors are much smaller proteins and they are not species specific. The same Transfer Factors cause the same kind of activities in all animal species.

## What do these Transfer Factor products contain?

1. Multiple fractions of Lymphokines that transfer information between white blood cells.
2. Additional nutritional and immune support that greatly enhance the effectiveness of the Lymphokines and have many other benefits.

## Multiple fractions result in multiple functions:

- One function is to provide antigenic recognition.
- One function strengthens Natural Killer Cells in their attack on cells that are infected or otherwise abnormal.
- One function improves immune system regulation in reaction to environmental stimuli such as pollen, dander etc.

## Questions?

For small animal questions call  
Dr. Jim Kramer at  
800-722-7088 or email: [answers@TFVet.com](mailto:answers@TFVet.com).

For large animal and equine questions call  
Dr. Lowell Smalley  
at 402-679-0333 or email him at: [evcdoc@alltel.net](mailto:evcdoc@alltel.net)

DR. JIM KRAMER

"Our results with these Transfer Factor Products have been one of the most exciting and gratifying experiences in my 20+ years as a veterinarian."

I love them because:

- They give us something to do in frustrating cases when we are starting to feel helpless.
- Even in difficult cases most animals improve and the clients are happy with us.
- Once clients see the response they come in regularly for more.
- We have not seen negative side effects.
- They can be used with virtually any other treatment regimen.

*"Transfer Factor proved itself to me in many cases."*

## What animals can benefit from Transfer Factor Animal Stress Pack?

Cats, dogs, calves, foals, birds, rabbits, pocket pets, reptiles and exotics.

## Transfer Factor Animal Stress Pack

Use as adjunct immune therapy or to re-hydrate animals. Use alone or with the Transfer Factor Canine Complete or Feline Complete. We find new effective uses for this product continually.

**ANIMAL STRESS PACK** is a powdered product to be added to the food or water that contains high levels of Advanced Formula Transfer Factor plus other immune active substances, vitamins and electrolytes. Label dosage recommendations suggest giving half the dose morning and night as follows:

- |                |   |
|----------------|---|
| Small Animals: | 2-70 lbs body wt: Give 2 level teaspoons per 10 lbs<br>Over 70 lbs body wt: Give 1 packet daily   |
| Large Animals: | 2-30 lbs body wt: Give 2 level teaspoons per 10 lbs<br>31-100 lbs body wt: Give ½ packet daily<br>Over 100 lbs body wt: Give 1 packet daily |

*A box of Transfer Factor Animal Stress Pack contains 7 packages.  
Each package contains 16 teaspoons of powder.*

## Transfer Factor Canine Complete and Feline Complete

Use as adjunct immune therapy. We find new effective uses for these products continually.

**TRANSFER FACTOR CANINE COMPLETE AND TRANSFER FACTOR FELINE COMPLETE** are powdered products that contain Advanced Formula Transfer Factor plus other immune active substances and vitamins, minerals, trace minerals, probiotics, glucosamine, essential fatty acids and amino acids.

A measuring scoop is included.  
One canister contains approximately 60 scoops.  
Label dosage recommendations:

Give Canine Complete once daily on food:  
½ scoop for less than 10 lbs body wt.  
1 scoop from 10-70 lbs body wt.  
1 ½ scoops for dogs weighing from 51-100 lbs.

Give Feline Complete once daily on food:  
½ scoop for less than 3 lbs body wt.  
1 scoop for 3-10 lbs body wt.  
1 ½ scoops for cats weighing from 11-15 lbs.
